Financing solutions for energy renovation in Europe

eu-peers.eu

Co-funded by
the European Union

Speakers

Françoise Refabert – Energies Demain

Nicholas Stancioff - Ekubirojs

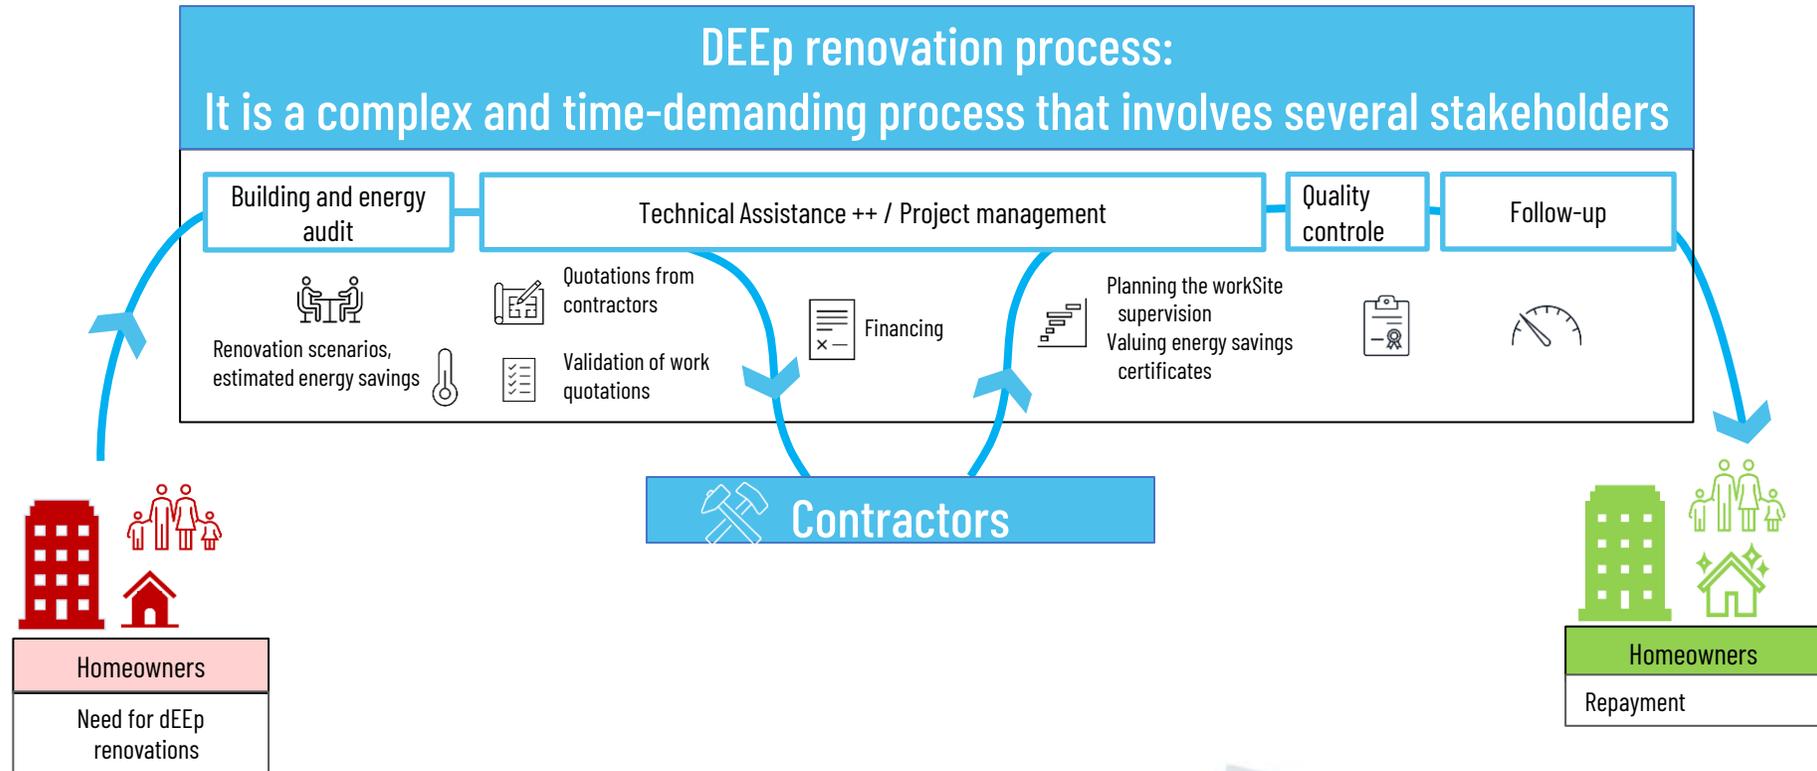

Valentina Cabal – GNE Finance

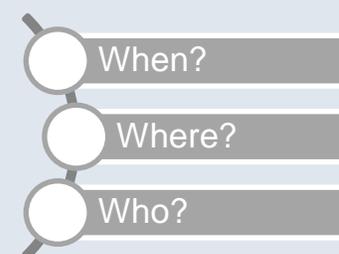

Current context

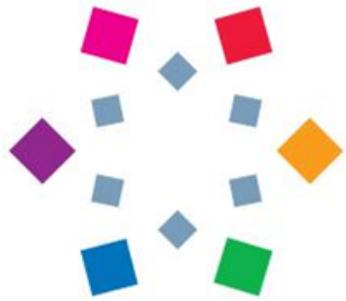

For the period 2021-2027, a estimated combined funding between RRF and Cohesion funding of **€66bn** has been allocated for energy renovation and energy efficiency. These funds alone cannot cover the investment needed to meet the 55% emissions reduction target for 2030, which according to the Renovation Wave strategy will require additional investment of **€275bn per year**.

- **What are the main barrier to private investments in energy efficiency?**
- **What are the lessons learnt on mobilising of private investments?**

Financing energy efficiency is a complex process that involves different stakeholders – not all solutions are applicable to all situations and all agents
